### PRODUCT DESCRIPTION

This 6" x 7' Schedule 40 steel pipe is the dependable choice for creating bollards that will stand up to daily wear and demanding conditions. The 6-5/8" outside diameter provides the strength needed for traffic guidance, asset protection, and facility safety applications. Its solid wall construction makes it suitable for embedding in concrete or setting in areas where long-term durability is essential. This size is commonly used for commercial sites, parking areas, storefront protection, and industrial environments where a robust barrier is required. Whether installed on its own or paired with a bollard cover, it offers a reliable foundation built to last.
