PRODUCT DESCRIPTION

This 4" x 7' Schedule 40 steel pipe is a solid, reliable option for building long-lasting bollards in commercial or industrial settings. The 4-1/2" outside diameter provides a strong foundation for guiding vehicles, securing storefronts, and protecting equipment or walkways. Its wall thickness and consistent structural strength make it suitable for embedding in concrete or setting in high-traffic areas. This size is commonly used with standard bollard covers and is well suited for facilities that need a dependable barrier without excessive bulk. Designed for durability and straightforward installation, it delivers a practical solution for everyday site protection.
