PRODUCT DESCRIPTION

The FlexBollard is a durable, flexible bollard system engineered to deliver the look of a rigid steel post while providing advanced impact resistance. Built with a galvanized steel core and a spring base, it flexes in any direction upon contact, then returns upright—eliminating the need for costly replacements due to accidental bumps or low-speed collisions.

Available in a wide selection of sizes and colors, the FlexBollard adapts to any environment—from commercial storefronts to industrial loading zones. Optional ADA-compliant graphics are available to enhance visibility and support accessibility standards. For businesses seeking a cost-effective alternative to fixed posts, FlexBollard provides superior durability, low maintenance, and an attractive finish that holds up over time.

• Flex Technology – Built with a galvanized steel post and a rugged internal spring, FlexBollard absorbs impact from any direction and returns upright without damage.

• Looks Solid, Acts Smart – Maintains the bold, rigid look of a traditional steel bollard while secretly flexing under pressure to prevent costly

damage.

• Engineered for the Elements – Designed to endure extreme weather and high winds, making it ideal for demanding outdoor environments.

• Ideal for High-Traffic Locations – Perfect for restaurants, car washes, parking areas, retail stores, gas stations, stadiums, convention & banquet centers, hotels, and hospitals.
