Installation Type	Concrete / Asphalt / Natural Ground / Adhesive

SPECIFICATIONS

Install Hardware	Adhesive, Asphalt, Concrete, Ground Spike
Base Size	9" x 9" x 1/8"
Installation Method	Surface Mount
Material	Steel Pipe

PRODUCT DESCRIPTION

The FlexPost system is the proven solution for minimizing damage and reducing maintenance costs in high-traffic areas. Engineered with a durable galvanized steel post and flexible spring base, it absorbs vehicle impacts from any direction and returns to its original position—eliminating the need for costly signpost replacements. Its sleek, rigid appearance maintains visual authority while concealing its high-performance flex technology.

Designed for fast and easy surface mounting, FlexPost installs without core drilling or excavation. It is ideal for use in environments where traditional posts bend or break, such as retail parking lots, restaurants, car washes, gas stations, and healthcare campuses. With corrosion-resistant finishes and hardware included for various surfaces, FlexPost is built to perform in any climate, season, or location where signage and safety go hand in hand.
