Base Size	8" x 8"
Outer Diameter	2-3/8"
Finish	Galvanized
Material	Steel Pipe

AVAILABLE ADD-ONS

Add-On
Detent Bracket Kit

PRODUCT DESCRIPTION

FlexPost-XL is the premier heavy-duty flexible bollard signage solution, built for high-performance environments where durability and safety are critical. Its robust design withstands extreme wind conditions and absorbs high-speed impacts from any direction, thanks to a concealed 5/16” thick internal steel spring that allows full 360-degree flex. Despite its flexibility, FlexPost-XL maintains a rigid, professional appearance that commands attention and reinforces traffic control.

Engineered for versatility, FlexPost-XL supports oversized and multi-panel regulatory signage without compromise. Its rugged cast galvanized steel base resists corrosion and harsh environmental conditions, making it ideal for long-term outdoor use. For added stability, an optional detent bracket kit can be installed to keep the post rigid until impact occurs, offering tailored performance for high-traffic or high-risk zones.

FlexPost-XL is a trusted solution across a wide range of commercial and institutional settings, including restaurants, car washes, parking

lots, retail centers, gas stations, stadiums, convention and banquet centers, hotels, and hospitals. By reducing repair costs and maintaining site aesthetics, FlexPost-XL delivers long-term value in every installation.
