PRODUCT DESCRIPTION

Our 4.5" Height Guard overhead clearance bar is a bright, durable solution for preventing costly run-ins with low-hanging structures by visually alerting drivers to low clearance structures. The Height Guard clearance bar is built from tough High Density Polyethylene (HDPE), it's made to last, with excellent strength, weather resistance, and chemical durability for both indoor and outdoor use.

The bar is impact-resistant and features recessed reflective stripes for maximum visibility day or night. Standard safety messages are available like CLEARANCE, DO NOT ENTER, EXIT ONLY, and ENTER ONLY. The clearance bar also comes with a set of eye hooks. (Chains are sold separately)

To save on shipping and make installation a breeze, Height Guard clearance bar ships unassembled in two sections. It's guaranteed not to fade for five years and comes in a variety of colors to suit your brand or boost visibility. Perfect for parking garages, car washes, drive-thrus, loading zones, tunnels, and anywhere else you need to clearly alert drivers to low overhead clearance. Height Guard is the simple, professional way to keep drivers and property safe.

FREQUENTLY ASKED QUESTIONS

Q: How are clearance bars mounted?

They hang from chains or cables anchored to the overhead structure, allowing them to swing freely on impact rather than transferring force to the mounting point. (Eyehooks for existing structure not included)

Q: What if I need a custom height restriction displayed?

Height Guard clearance bars are available with 3.25" sticker kits that allow you to set the height displayed on the clearance bar.

Q: What height should I hang my clearance bar?

The bar should be hung at or slightly below the actual clearance height of your structure, so it makes contact with oversized vehicles before they reach the structure itself.

Q: Where are clearance bars typically installed?

Clearance bars are most commonly installed at the entrances of parking garages, drive-thru lanes, loading docks, warehouse entrances, and anywhere an overhead obstruction could be a height restriction for passing vehicles.
