PRODUCT DESCRIPTION

Our Height Guard 7" overhead clearance bar is built to stand out—offering maximum visibility and tough impact resistance for busy areas where low-hanging structures can be a hazard. Crafted from High Density Polyethylene (HDPE), this long bar is strong, weather-tough, and designed to handle the demands of commercial or municipal use.

With lengths up to 144", it's perfect for wider drive lanes and large entrances, from parking structures and tunnels to car washes, loading docks, and more. Bold messages like CLEARANCE, DO NOT ENTER, EXIT ONLY, and ENTER ONLY keep drivers informed, while recessed reflective stripes make sure it's easy to see day or night. Plus, it's guaranteed to resist fading for five years—even under harsh outdoor conditions.

To make life easier, the bar ships in two sections for simpler handling and lower shipping costs. The clearance bar comes with a set of eye hooks. (Chains are sold separately.)

You can choose from a wide range of colors to match your branding or boost visibility. With its larger diameter and extended length, the Height Guard 7" clearance bar is an excellent way to protect your property.

FREQUENTLY ASKED QUESTIONS

Q: How are clearance bars mounted?

They hang from chains or cables anchored to the overhead structure, allowing them to swing freely on impact rather than transferring force to the mounting point. (Eyehooks for existing structure not included)

Q: What if I need a custom height restriction displayed?

Height Guard clearance bars are available with 3.25" sticker kits that allow you to set the height displayed on the clearance bar.

Q: What height should I hang my clearance bar?

The bar should be hung at or slightly below the actual clearance height of your structure, so it makes contact with oversized vehicles before they reach the structure itself.

Q: Where are clearance bars typically installed?

Clearance bars are most commonly installed at the entrances of parking garages, drive-thru lanes, loading docks, warehouse entrances, and anywhere an overhead obstruction could be a height restriction for passing vehicles.
