SPECIFICATIONS

Material	Recycled Rubber
Color	Yellow Reflective Tape / Black
Installation Method	Surface Mount
Installation Type	Asphalt / Concrete

PRODUCT DESCRIPTION

These recycled rubber speed humps are designed to slow traffic while maintaining a steady flow, helping to improve safety in driveways, parking lots, and private roads. It reduces vehicle speeds to approximately 10 to 15 miles per hour without requiring a complete stop.

The modular design features an interlocking tongue and groove system, allowing multiple units to be connected for extended coverage across wider lanes. It installs easily on both asphalt and concrete surfaces, and is light enough for either permanent or temporary use.

Each unit includes one center hump and two end caps, measuring 38.35" wide overall. Additional center sections can be added to increase length as needed. Made from 100% recycled rubber with molded-in reflective tape for increased visibility.

Note: Additional center humps do not include end caps. Prop 65 Warning applies.
