SPECIFICATIONS

Diameter	24"
Height	41"
Material	Polyproylene Plastic
Installation Type	Tough Lock System
Base Size	18" Pyramid / 18" Square / 24" Round

PRODUCT DESCRIPTION

Give worn or vulnerable light pole bases a fresh, professional appearance while guarding them against future impact damage. The 24" Poletector Light Pole Guard is built from rugged polypropylene that resists cracking, fading, and weathering. It’s designed to cover unsightly bases and shield them from vehicles, reducing repair expenses and helping your property look well maintained year-round.

This model is engineered to fit 24" bases - round, square, or pyramid - and provides reliable coverage at the level where damage usually happens. Once in place, it conceals chipped concrete, rust, and paint damage, instantly improving the presentation of your parking lot or facility. The custom-cut design allows for a clean fit around different pole shapes, making it versatile for most standard installations.

Installation is quick and secure with the Poletector’s locking system, which prevents tampering and holds the guard firmly in place. With a choice of colors ranging from bright safety hues to neutral tones, you can either blend with the environment or boost visibility depending on your needs. Instead of dealing with constant patchwork and repainting, this 24" guard gives you a straightforward, maintenance-free solution.
