PRODUCT DESCRIPTION

The Portable Media Bollard is a versatile and durable solution for directing traffic, promoting messages, or enhancing site visibility. Designed to hold two 8" by 36" signs, this all-plastic sign panel requires no maintenance and delivers long-lasting performance in a variety of environments.

Each Portable Media Bollard features a recessed panel to protect applied signage, along with a molded-in handle for easy transport and repositioning. Each bollard comes with a recycled rubber base, which slides securely over the bollard for added stability. Additional bases available for purchase to increase weight in high wind environments.

Whether you choose to apply your own graphics or order professionally applied signage, the Portable Media Bollard offers exceptional flexibility. A vinyl sheeting overlay can be used to apply temporary or permanent graphics, and the panel's smooth plastic face is optimized for clean application. This bollard is available in three colors—white, black, and orange.

Made in the USA, this bollard is ideal for valet services, directional signage, event venues, and other high-traffic areas where portability and durability are key.
