### PRODUCT DESCRIPTION

The beveled slope top concrete bollard is a straightforward yet refined choice for site protection. Its round profile provides the strength needed to stop vehicles, while the angled top detail adds a subtle architectural touch. Built from precast concrete, the bollard is designed to stand up to years of exposure without losing its form or function. It works equally well as a security measure in front of building entrances as it does lining walkways or defining parking areas. With its clean shape and durable construction, the beveled top style offers dependable safety and a timeless look that blends into almost any environment.
