- Shipping Included (Commercial delivery only)
- Non-returnable item

SPECIFICATIONS

Material	Schedule 10 Steel
Wall Thickness	0.134"
Finish	Prime Coated Red
Outside Diameter	4.5"
Length	72 inches

PRODUCT DESCRIPTION

This raw steel pipe bollard is designed for fabricating in-ground steel bollards for perimeter protection, vehicle mitigation, and asset safeguarding applications. Manufactured from 4.5" outside diameter Schedule 10 steel with a 0.134" wall thickness, it provides a lightweight yet durable solution suitable for standard commercial and industrial installations.

The pipe is supplied prime-coated in red for temporary corrosion resistance during handling and installation. For increased impact resistance and structural strength, the bollard may optionally be filled with concrete after setting. Finish with Post Guard Bollard Covers!

Typical Installation Configurations:

• 36" below grade + 36" above grade

• 24" below grade + 48" above grade
