SPECIFICATIONS

Weight	40 lbs
Dimensions (L x W x H)	48 x 4 x 4 in

PRODUCT DESCRIPTION

This 3½-inch OD Schedule 40 steel pipe bollard measures 48 inches long and is designed for installations requiring approximately 24 inches above grade and 24 inches below grade. Installation may be completed by core drilling an appropriately sized opening through the existing concrete slab, excavating to the specified embedment depth, positioning the bollard plumb, and securing it with concrete or approved non-shrink grout. Final hole diameter, footing dimensions, reinforcement, and installation method should be determined based on site conditions and applicable project requirements.
